REMARKS

Response to Objection of Claims 40 and 63

In the February 5, 2002 Office Action, the Office objected to claims 40 and 63 due to a minor informality. Specifically, the Office believes that the term "abstracted" should be replaced with -- extracted--. Applicants used the term "abstraction" in the specification (see page 15, first paragraph, last sentence) to define the process of removal of oxygen during the electrode forming step. Applicants have included herewith a copy of the definition of the term "abstracted" from The American Heritage Dictionary (see Appendix C). The term "abstracted" is defined as "removed or separated from something" and this is definition that applicants intended for use of the term in the present specification and claims. According, applicants are requesting that the Office withdraw the objection regarding applicants' choice of terms used in the specification and claims.

Rejection of Claims and Traversal Thereof

In the February 5, 2002 Office Action,

claims 40-55 and 61-63 were rejected under 35 U.S.C. §112, first paragraph; and

claims 40-43, 45-47, 49-55 and 63 were rejected under 35 U.S.C. §102(e) as being anticipated by U.S. Patent No. 6,300,212 I(Inoue, et al.) and

claims 44, 48, 61 and 62 were rejected under 35 U.S.C. §103 as being unpatentable over Inoue, et al. and in further view of U. S. Patent No. 6,020,643 (Fukuzumi, et al).

These rejections are traversed and reconsideration of the patentability of the pending claims is requested in light of the following remarks.

Rejection under 35 U.S.C. § 112, first paragraph

Claims 40-55 and 61-63 were rejected under 35 U.S.C. §112, first paragraph, as containing subject matter which was not described in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

According to the Office, the claim language;

"implies that the oxygen concentration throughout the ferroelectric oxide or high ϵ oxide material is completely stoichiometric, which is not supported by the specification, even though the specification supports the subject matter that the ferroelectric oxide or high ϵ oxide material at the upper surface and the vicinity thereof is substantially stoichiometrically complete in oxygen concentration..."

Applicants have amended claims 40 and 63 to include language directly from the specification that explicitly describes microelectronic devices comprising a ferroelectric oxide or high ε oxide film layer that is stoichiometrically complete in oxygen not only on the top-surface of the ferroelectric oxide or high ε oxide film layer but throughout the ferroelectric oxide or high ε oxide film layer. Specifically, the specification states that one of the objects of the present invention is "to provide a microelectronic device structure including a ferroelectric or high ε film material overlaid with a top electrode structure, wherein the ferroelectric or high ε material is stoichiometrically non-deficient - i.e., is stoichiometrically satisfied - in oxygen content, even at the surface region of the ferroelectric or high ε film material adjacent to the TE layer." (see the bottom of page 4 to the top of page 5 of the instant specification). Further, on page 16. line 22, the specification expressly states that the "oxygen in said ferroelectric oxide or high ε oxide film material is in proper stoichiometric proportion to metal cations therein." Still further, it is stated on page 16, second paragraph, the amount of oxygen is maintained during the earlier portions of the growth process for the PZT material at a level (by appropriate partial pressure, absolute pressure and concentration) that is in the proper stoichiometric amount for PbZrTiO₃ formation. Clearly, one skilled in the art reading the above described statements would know that the applicants, at the time the application was filed, had possession of the claimed invention.

It should be noted that the Office bears the burden of presenting a prima facie case of unpatentability and insofar as the written description requirement is concerned, that burden is discharged only by "presenting evidence or reasons why persons skilled in the art would not recognize in the disclosure a description of the invention defined by the claims." In re Wertheim, 191 USPQ 97 (CCPA 1976). Further, if the specification, such as in the present case, contains a description of the claimed invention albeit not in ibsis verbis, the Office in order to meet the burden of proof, must provide reasons why one of ordinary

4070-337 RCE

skill in the art would not consider the description sufficient. *In re Alton*, 37 USPQ2d 1578 (Fed. Cir. 1996). The Office has not met this burden. As stated by the Court in *In re Eickmeyer*¹, "[A] statement of appellant's invention [in his specification] which is as broad as appellant's broadest claims is sufficient to meet this requirement." Applicants have met this requirement and request the description rejection be withdrawn.

Rejection under 35 U.S.C. §102(e)

Claims 40-43, 45-47, 49-55 and 63 were rejected under 35 U.S.C. §102(e) as being anticipated by U.S. Patent No. 6,300,212 (Inoue, et al.). Enclosed and submitted herewith is a Declaration under 37 CFR §1.131 executed by the inventors. The Declaration attests to facts showing completion and possession of the claimed invention prior to the effective date of the following reference cited in the February 5, 2002 Office Action against the claims currently pending in the application.

Reference

Effective Date

Inoue, et al.

July 29, 1998 (35 U.S.C. §102(e))

The Declaration includes appended Exhibit 1.

Exhibit 1 is a copy of pages 1-2 of an Invention Disclosure Document, titled "[O]xidizing top electrode deposition process", on which all dates have been blacked out, but which dates, and the date of the document, are prior to the effective date of the Inoue, et al. reference.

The Invention Disclosure Document identifies co-inventors Peter C. Van Buskirk, Steven M. Bilodeau, Stephen T. Johnston, Daniel J. Vestyck, and Michael W. Russell, as writers of the document, and discusses the need for preventing "the ferroelectric or high ϵ film from becoming oxygen deficient during TE deposition." Page 1 discusses the need for preventing the ferroelectric or high ϵ film from becoming oxygen deficient during TE deposition. (see last paragraph in Section (1)). Page 2, discusses different methods for preventing oxygen deficiency in the ferroelectric film, including top electrode deposition techniques and PZT deposition techniques as described in the present specification. This statement provides further evidence that applicants envisioned a microelectronic device that comprised a ferroelectric or high ϵ film that was stoichiometrically satisfied in oxygen content, even at the surface region of the ferroelectric or high ϵ film material adjacent to the TE layer.

¹ In re Eickmeyer, 202 USPQ 655 (CCPA 1979)

Exhibit 1 in addition to the enclosed Declaration shows completion and possession of the instant claimed invention prior to the effective date of the Inoue, et al. reference.

Accordingly, applicants respectfully request the withdrawal of the rejection of claims 40-43, 45-47, 49-55 and 63 under 35 U.S.C. §102(e) as being anticipated by U.S. Patent No. 6,300,212 I(Inoue, et al.).

Rejection under 35 U.S.C. §103(a)

In the February 5, 2002 Office Action, the only remaining issue included a rejection under 35 U.S.C. §103(a) based on a combination of Inoue, et al. and Fukuzumi, et al. The obviousness rejection relies on Inoue, et al. as the primary reference. As stated above, applicants have filed herewith a Declaration under 37 CFR §1.131 executed by the inventors and attesting to facts showing completion and possession of the presently claimed invention prior to the effective date of the Inoue, et al reference thereby removing the Inoue, et al. as competent prior art.

The Office admits that Inoue, et al. does not expressly disclose that Pt oxide, Rh or Rh oxide can be used for a top electrode. In an attempt to remedy the shortcomings of the Inoue, et al., the Office has cited Fukuzumi, et al. for disclosing a top electrode fabricated of Pt oxide, Rh or Rh oxide. However, Inoue, et al. is no longer competent prior art and the Fukuzumi, et al., reference, either alone or combined with Inoue, et al. does not render applicants' claimed invention *prima facie* obvious.

According to MPEP 706.02(j):

"To establish a *prima facie* case of obviousness, three basic criteria must be met. First, there must be some suggestion or motivation, either in the references themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine reference teachings. Second, there must be a reasonable expectation of success. Finally, the prior art reference (or references when combined) must teach or suggest all the claim limitations. The teaching or suggestion to make the claimed combination and the reasonable expectation of success must both be found in the prior art, and not based on applicant's disclosure. *In re Vaeck*, 947 F.2d 488, 20 USPQ2d 1438 (Fed. Cir 1991)."

The Fukuzumi, et al. reference describes devices and methods of forming such devices comprising a plurality of contact holes at different depths that prevent electrical potential variations of an upper electrode during the contact hole formation step. The reference does not in any way disclose, teach or suggest the presently claimed invention to form a microelectronic device that comprises a ferroelectric or

4070-337 RCE

high ε film that is stoichiometrically satisfied in oxygen content. In light of the above discussion and the fact that the Office has not met its burden of establishing a prima facie case of obviousness, applicants request that the rejection of claims 44, 48, 61 and 62 on the basis of obviousness, be withdrawn.

CONCLUSION

Applicants have satisfied the requirements for patentability. All pending claims are free of the art and fully comply with the requirements of 35 U.S.C. §112. It therefore is requested that Examiner Hu reconsider the patentability of claims 40-55 and 61-63, in light of the distinguishing remarks herein, and withdraw all rejections, thereby placing the application in condition for allowance. Notice of the same is earnestly solicited. In the event that any issues remain, Examiner Hu is requested to contact the undersigned attorney at (919) 419-9350 to resolve same.

Respectfully submitted,

Marianne Fuierer

Appendix A - Version with Markings to Show Changes Made

- 40. (Twice amended) A microelectronic device structure including a top electrode layer on a top surface of a ferroelectric oxide or high ε oxide film material, wherein said ferroelectric oxide or high ε oxide film material is stoichiometrically satisfied in oxygen content, [stoichiometrically complete in oxygen content throughout,] including the top surface region of the ferroelectric oxide or high ε oxide film material, and wherein the top electrode layer does not contain oxygen abstracted from the thin film of ferroelectric or high ε material underneath.
- 63. (Amended) A ferroelectric or high ε capacitor comprising:
 - a bottom electrode layer formed of a material selected from the group consisting of Ir, Ir oxide, Rh, Rh oxides, and compatible mixtures and alloys thereof;
 - a thin film of a ferroelectric or high ε material over the bottom electrode, wherein the material is stoichiometrically satisfied in oxygen content, [stoichiometrically satisfied in oxygen content throughout,] including the surface region of the material adjacent to the top electrode layer;
 - a top electrode layer on the thin film of ferroelectric or high ϵ material, which is formed of a material selected from the group consisting of Ir, Ir oxide, Rh, Rh oxides and compatible mixtures and alloys thereof, wherein the top electrode layer does not contain oxygen content abstracted from the thin film of ferroelectric or high ϵ material underneath.

Appendix B - All Pending Claims

- 40. (Twice amended) A microelectronic device structure including a top electrode layer on a top surface of a ferroelectric oxide or high ε oxide film material, wherein said ferroelectric oxide or high ε oxide film material is stoichiometrically satisfied in oxygen content, including the top surface region of the ferroelectric oxide or high ε oxide film material, and wherein the top electrode layer does not contain oxygen abstracted from the thin film of ferroelectric or high ε material underneath.
- 41. A microelectronic device structure according to claim 40, wherein said ferroelectric or high ε film comprises an oxide perovskite or layered structure perovskite.
- 42. A microelectronic device structure according to claim 40, wherein said ferroelectric or high ε film comprises a material selected from the group consisting of lead zirconium titanate, barium and/or strontium titanates, and strontium bismuth tantalates.
- 43. A microelectronic device structure according to claim 40, wherein said ferroelectric or high ε film comprises a lead zirconium titanate material.
- 44. A microelectronic device structure according to claim 40, wherein said ferroelectric or high ε film comprises a barium and/or strontium titanate material.
- 45. A microelectronic device structure according to claim 40, wherein said ferroelectric or high ε film comprises a strontium bismuth tantalate material.
- 46. A microelectronic device structure according to claim 40, wherein said top electrode layer comprises a material selected from Pt, Pt oxides, Ir, Ir oxides, Pd, Pd oxides, Rh, Rh oxides, and compatible mixtures and alloys of the foregoing.
- 47. A microelectronic device structure according to claim 40, wherein said top electrode layer comprises a Pt material.

- 48. A microelectronic device structure according to claim 40, wherein said top electrode layer comprises a Pt oxide material.
- 49. A microelectronic device structure according to claim 40, wherein said top electrode layer is formed of Ir.
- 50. A microelectronic device structure according to claim 40, wherein said top electrode layer comprises an Ir oxide material.
- 51. A microelectronic device structure according to claim 40, wherein the top electrode layer is formed of Ir or IrO₂.
- 52. A microelectronic device structure according to claim 40, wherein the top electrode is formed in an oxygen-enriched environment.
- 53. A microelectronic device structure according to claim 40, wherein said top electrode is formed of a metallic non-oxide material by sputtering in the presence of oxygen.
- 54. A microelectronic device structure according to claim 40, wherein said top electrode is formed of a noble metal that is formed by evaporation of a noble metal source material in the presence of oxygen.
- A microelectronic device structure according to claim 40, wherein the top electrode layer is formed of a noble metal by a chemical vapor deposition process that incorporates oxygen.
- 61. A microelectronic device structure according to claim 40, wherein said top electrode layer comprises Rh.
- 62. A microelectronic device structure according to claim 40, wherein said top electrode layer comprises a Rh oxide material.
- 63. (Amended) A ferroelectric or high ε capacitor comprising:

a bottom electrode layer formed of a material selected from the group consisting of Ir, Ir oxide, Rh, Rh oxides, and compatible mixtures and alloys thereof;

a thin film of a ferroelectric or high ε material over the bottom electrode, wherein the material is stoichiometrically satisfied in oxygen content, including the surface region of the material adjacent to the top electrode layer;

a top electrode layer on the thin film of ferroelectric or high ϵ material, which is formed of a material selected from the group consisting of Ir, Ir oxide, Rh, Rh oxides and compatible mixtures and alloys thereof, wherein the top electrode layer does not contain oxygen content abstracted from the thin film of ferroelectric or high ϵ material underneath.

-tēmus, from tēmētum, liquor, mcad, winc.] —ab-ste'mi-ous-ly

-lemis, from temetumi, liquor, mead, wine.] —ab-ste'mi-ous-ly adv. —ab-ste'mi-ous-ness n.

ab-sten-tion (āb-stēn'shən) n. The act or habit of abstaining. [Late Latin abstentio, from Latin abstinere, ABSTAIN.]

ab-stinence (āb'stə-nəns) n. 1.a. Denial of the appetites; abstention. b. Abstention from alcoholic beverages. 2. Roman Catholic Church. Abstention from specified foods on days of penitential observance. [Middle English, from Old French, from Latin abstinentia, from abstiners, present participle of abstinere, ABSTAIN.] —ab'sti-nent-ly adv. Synonyms: abstinence, self-denial, temperance, sobriety, continence. These nouns express restraint of one's apnetites or de-nence.

nence. These nouns express restraint of one's appetites or de-sires. Abstinence implies the willful avoidance of pleasures, especially of food and drink, thought to be harmful. Self-denial suggests resisting one's desires for some higher, moral goal.

Temperance and sobriety both stress avoidance of alcohol, but temperance is more often associated with the mere curtailment of drinking, while sobriety additionally suggests conservative action or manner. Continence specifically refers to restraint of

sexual activity.

ab-stract (ab-strakt', ab'strakt') adj. Abbr. abs., abstr. 1. Considered apart from concrete existence or a specification thereof.

2. Theoretical; not applied or practical.

3. Not easily understood; abstruse.

4. Thought of or stated without reference to a stood; abstruse. 4. Thought of or stated without reference to a specific instance. 5. Designating a genre of painting whose intellectual and affective content depends solely on intrinsic form.

—n. (ab'strākt'). Abbr. abs., abstr. 1. A statement summarizing the important points of a given text. 2. The concentrated essence of a larger whole. 3. Something abstract, as a term. —in the abstract. Apart from actual substance or experience.

—1t.v. (ab-strākt' for senses 1, 2, 3; ab'strākt' for sense 4) abstracted, -stracting; -stracts. 1. To take away; remove. 2. To remove without permission; filch. 3. To consider theoretically; think of (a quality or attribute) without reference to a particular. remove without permission; filch. 3. To consider theoretically; think of (a quality or attribute) without reference to a particular example or object. 4. To summarize. [Middle English, from Latin abstractus, "removed from (concrete reality)," past participle of abstrahere, to pull away, remove: abs., ab., away from trahere, to pull (see tragh- in Appendix*).]—ab-stract or n.—ab-stract or n.—ab-stract or n.—ab-stract or n.

to push (see treud- in Appendix*).] -ab-struse'ly adv.

the United Arab Emirates. Population, 22,000.

are United Arab Emirates. Population, 22,000.

a-bu-li-a (2-boo'le-2) n. Also a-bou-li-a. Psychiatry. Loss or impairment of the ability to decide or act independently. [New Latin, from Greek aboulia, irresolution: a-, without + boulē, will (see gwel-1 in Appendix*).] —a-bu'-lic adj.

A-bu-na (a-boo'na). A river rising in northeastern Bolivia and flowing 200 miles northeast to the Madeira in Brazil.

a-bun-dance (a-būn'dans) n. Also a-bun-dan-cy (-dan-sē). 1. A great quantity sheatiful amount 2. Eullean to confloriem.

—a-bun dant-ly adv.

a-buse (2-by60z) tr.v. abused, abusing, abuses. 1. To use wrongly or improperly; misuse. 2. To hurt or injure by maltreatment. 3. To assail with contemptuous, coarse, or insulting words; revile. —n. (2-by60s'). 1. Misuse. 2. A corrupt practice or custom. 3. Maltreatment. 4. Insulting or coarse language. [Middle English abusen, from Old French abuser, from abus, improper use, from Latin abuses, a using up, past participle of

abūtī, to use up, make (improper) use of : ab-, away + ūtī, to USE.] -a-buş'er n.

USE.] —a ous et n.

Synonyms: abuse, misuse, mistreat, ill-treat, maltreat. These verbs mean to treat a person or thing wrongfully or harmfully, Abuse applies to wrongful or unreasonable treatment by deed or word. Misuse stresses incorrect or unknowledgeable handling; it implies but does not emphasize harm. Mistreat, ill-treat, and maltreat all have the sense of inflicting injury, usually physical and often with intent to do harm. Mistreat may imply only negligence or lack of knowledge on the offender's part, but more often refers to harm inflicted deliberately. Ill-treat more specifically applies to harmful treatment of persons or animals.

more often refers to harm inflicted deliberately. Ill-treat more specifically applies to harmful treatment of persons or animals. Maltreat implies rough handling.

A-bu Sim-bel (a'bōo sim'bəl). A village in the Aswan area of southern Egypt; site of a group of ancient Egyptian rock temples built by Rameses II.

a-bu-sive (2-byōo'siv, -ziv) adj. 1. Of, pertaining to, or characterized by abuse. 2. Wrongly or incorrectly used or treated.

3. Serving for abuse; insulting; reviling. —a-bu'sive-ly adv. a-but (2-būt') v. abutted, abutting, abust. —int. To touch at one end or side of something; lie adjacent. Used with on, upon, or against. —t. To border upon; be next to. [Middle English abuten, from Old French abuter, to buttress, put an end to: a. to + buter, to strike, finish, from Common Romance bottare (unattested) (see bhou- in Appendix*).] —a-but'ter n. a-bu-ti-lon (2-byōo't2-lōn') n. Any of various shrubs or plants of the genus Abutilon; especially, the flowering maple (see). [New Latin, from Arabic aubūtilūn.]

a-but-ment (2-būt'mont) n. 1. The act or process of abutting.

2. a. Something that abuts. b. That on which something abuts. c. The point of contact of two abutting objects or parts.

3. Architecture. That element which shares a common boundary or surface with its neighbor. 4. Engineering: a. A structure that supports the end of a bridge. b. A structure that anchors the cables of a suspension bridge.

cables of a suspension bridge.

a-but-tal (2-būt'l) n. 1. An abutment. 2. Plural. The parts, especially of a piece of land, that abut against other property;

specially of a piece of land, that abut against other property; boundaries.

ab-volt (äb-volt') n. Abbn. abv. A centimeter-gram-second electromagnetic unit of potential difference, equal to the potential difference between two points such that one erg of work must be performed to move a one-abcoulomb charge from one of the points to the other. It is equal to one hundred-millionth (10-4)

points to the other. It is equal to one hundred-millionth (10-4) of a volt. (AB- (absolute) + volt.]
a-bysm (2-biz'2m) n. An abyss. [Middle English abils line, from Old French, irregularly from Late Latin abyssus, ABYSS.]
a-bys-mal (2-biz'm2) adl. 1. Unfathomable; extreme. 2. Of or resembling an abyss. —a-bys'mal-ly adv.
a-byss (2-bis') n. 1. a. The primeval chaos. b. The bottomless pit; hell. 2. An unfathomable chasm; a yawning gulf. 3. Any immeasurably profound depth or void: "lost in the vast abysses" of more and time." (Losse Eight about 10 to 10 t

immeasurably profound depth or void: "lost in the vast abysses of space and time" (Loren Eiseley). [Late Latin abyssus, from Greek abussos (limne), "bottomless (lake)": a-, not + bussos, bottom (see gwadh- in Appendix*).]
a-byss-al (a-bls'a) adj. 1. Abysmal. 2. Of or pertaining to the great depths of the oceans.
Ab-ys-sin-i-a. The former name for Ethiopia. [New Latin, from Arabic Habashah, from Habash, Abyssinians.]
Ab-ys-sin-i-an (āb'2-sin'ē-an) adj. Of or pertaining to Ethiopia or its inhabitants. —n. An inhabitant of Ethiopia.
Abyssinian cat. A short-naired cat of a breed developed from Near Eastern stocks, having a reddish-brown coat tinned with

Near Eastern stocks, having a reddish-brown coat tipped with small black markings.

ac alternating current.

Ac The symbol for the element actinium.

a.c. Medicine. before meals (New Latin ante cibum)

A.C. 1. Air Corps. 2 alternating

A.C. 1. Air Corps. 2. alternating current. 3. athletic club.
4. before Christ (New Latin ante Christum).
a/c, A/C account; account current.

A. before Christ (New Latin ante Christum).

a/c, A/C account; account current.

a-ca-cia (e-kā'sha) n. 1. Any of various chiefly tropical trees of the genus Acacia, having compound leaves and tight clusters of small yellow or white flowers. Some species yield gums having a wide variety of uses. 2. Loosely, any of several related trees, such as the locust. 3. A substance, gum arabic (see). [Latin, from Greek akakia, probably from Egyptian.] acad. academic; academy.

ac-a-deme (âk'a-dem') n. 1. Sometimes capital A. The world of scholarship and higher education; the scholastic life or environment. 2. A scholar, teacher, or pedant.—the groves of Academe. 1. A college or university. 2. Academic life. [Pseudo-Greek form of Greek Akademia, ACADEMY.]

ac-a-de-mi-a (âk'a-de'mē-a) n. The academic world; academe. [New Latin, from Latin Academia, ACADEMY.]

sc-a-demi-ic (āk'a-de'm'k) adj. Abbr. acad. 1. Of, pertaining to, or characteristic of a school. 2. Relating to studies that are liberal or classical rather than technical or vocational. 3. Pertaining or belonging to a scholarly society or organization.

taining or belonging to a scholarly society or organization.

4. Scholarly to the point of being unaware of the outside world.

5. Based on formal education.

6. Formalistic; conventional. 7. Theoretical; speculative: "I took an academic interest in the thought of stealing the car" (John Knowles). —n. A student or indugin of stealing the car (John Knowles). —n. A student or teacher.—ac'a-dem'i-cal-ty adv.
ac-a-dem-i-cals (āk'a-dem'i-kalz) pl.n. The cap and gown tra-

ac-a-dem-i-cass (ak'-a-dem'-kauz) pi.m. The cap and gown uaditionally worn at academic ceremonies.

academic freedom. Liberty to pursue and teach relevant knowledge and to discuss it freely without restriction from school or public officials or from other sources of influence.

ac-a-de-mi-cian (āk'-a-de-mish'-an). Abbr. A. A member of an ac-a-de-mi-cian (āk'-a-de-mish'-an). art, literary, or scientific academy or society.

+ trahere, to pull (see tragh- in Appendix*).] —ab-stract'er n.
—ab-stract'ly adv. —ab-stract'ness n.
ab-stract-ed (āb-strāk'tid) adj. 1. Removed or separated from something; apart. 2. Lost or deep in thought; preoccupied; meditative. —See Synonyms at forgetful. —ab-stract'ed-ly adv.
—ab-stract'ed-ness n.

Synonyms: abstracted, absorbed, distraught, absent-minded.
These adjectives apply to absence of normal awareness of one's surroundings. Abstracted implies being so deep in thought or is

surroundings. Abstracted implies being so deep in thought as to be mentally elsewhere. Absorbed implies complete and pleasureable mental involvement in the object of thought. Distraught implies mental anxiety that makes concentration extremely difficult. Absent-minded suggests the making of trivial errors be-

nicult. Absent-minaed suggests the making of tivital errors oc-cause the mind is straying from the matter at hand: abstract expressionism. A school of painting that flourished after World War. II until the early 1960's, characterized by its emancipation from traditional brushwork in freely developing shape and design and by its exclusion of representational con-

ab-strac-tion (ab-strak'shan) n. 1. The act or process of reab-straction (ab-strak'shan) n. 1. The act or process of removing or separating. 2. a. The act or process of separating the inherent qualities or properties of something from the actual physical object or concept to which they belong. b. A product of this process; a general idea or word representing a physical concept. 3. Preoccupation. 4. An abstract work of art. ab-straction-ism (ab-strak'shan-iz'am) n. The theory and practice of abstract art. —ab-strac'tion-ist n. & adj. ab-strac-tive (ab-strak'tiv) adj. Of or derived by abstraction. ab-strace (ab-stroos') adj. Difficult to understand; recondite. See Synonyms at ambiguous, mysterious. [Latin abstraus, past participle of abstradere, to hide: abs-ab-, away + tradere, to push (see trend-in Amendica).

to push (see ureur in reposition in struse/ness n. ab-surd (āb-sūrd', -zūrd') adj. Ridiculously incongruous or unreasonable. See Synonyms at foolish. [French absurde, from Latin absurdus. See swer.2 in Appendix.*] —ab-surd'i-ty, ab-

abt, about.

A-bu Dha-by (a'ba da'ba). Also A-bu Dha-bi. The capital of

a-bun-dance (-būn'dons) n. Also e-bun-dan-ey (-don-sē). 1. A great quantity: plentiful amount. 2. Fullness to overflowing: "My thoughts... are from the abundance of my heart." (De Quincey). 3. Affluence; wealth. a-bun-dant (-būn'dont) adj. 1. In plentiful supply; more than sufficient; ample. 2. Abounding with; rich. Used with in. [Middle English abundaunt, from Old French abundant, from Latin abundans, present participle of abundare, ABOUND.]

—a-bun dantiy adv.

ac-a-demi-cism (āk'a-dēm' (a-kād'a-miz'am): Tradition flected in art.

flected in art.

a-dad-a-my'(a-kad'a-me) n.,
association of scholars. 2.

3. A secondary or college-private one. [From Academy A-cademia, from Greek Akat 10500 hy. from Akademia. Acadēmia, from Greek Akai losophy, from Akadēmia, Athens where Plato taught, hero, — Aca-dem'ie n. & c Aca-dia elo-kā'dē-o). 1. A f eastern Canada, that includ wick. 2. A parish in south-exiles.

A'ca-di-an (a-kā'dē-an) adj. inhabitants. —n. One of th

inhabitants. — One of the scendants. See Cajun.
A-ca-di-a National Park (a-144 square miles in area, on the scendants of Maine.
